UP YOUR RECYCLING GAME THIS YEAR

Did you know? When power lines, transformers and other metal structures are replaced, they're recycled! **The metal is reused, helping to offset costs and reduce environmental impact.**

Even your small actions add up to make a big difference! Begin with your electrical wires and cables, which hold valuable materials like copper and aluminum, making them easily recyclable. A great initial step is reaching out to electronics recycling companies, as they often accept cables, wires and cords for recycling purposes.

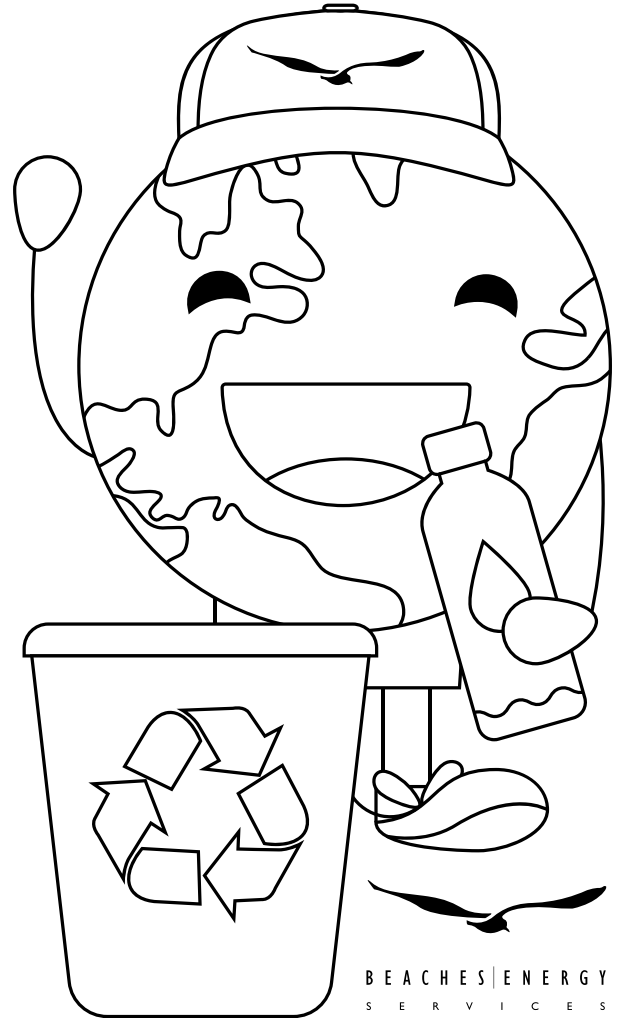

GO GREEN, SAVE GREEN: EARN ECO-FRIENDLY REBATES

Want to save smarter? Get rebates on select home upgrades when you apply within 90 days of installation with Beaches Energy. We'll help you save up to \$1,250 when you choose select energy-efficient home upgrades including A/C, heat, insulation, heat pump, water heater and more.
